

SCANflow

Processes. Optimising. Solutions.

SCANflow offers solutions by ideally combining...

... variable and interlocking modules which are perfectly tuned to meet your specific requirements. The optimising measures you have already initiated or which are already in place represent the basis. SCANflow networks processes and individual tasks to ensure a smooth overall concept.

A concept which meets your logistic issues and challenges – and even more than that. After all with SCANflow we provide a tool that is not only upgradable, but is able to keep pace with the latest technical standards.

● ISO Modular System

Cabinet systems • Central warehouse facilities • Mobile storage solutions
Medical trolleys • Carts for special uses • Commissioning trolleys • Transport systems

● NoCount® Software

RFID / Barcode order system • RFID cabinets

● Solution Design

● Real Time Location

Sentory tracking • Acoustic monitoring • Patient safety

● Navigation

ISO Modular System

Modular storage and transport system

Our modular storage and transport systems offers valuable support and ensures transparency in material supplies and stock-keeping.

NoCount® Software

Incorporating and processing material requirements

This system facilitates the registration and implementation of material requirements. Furthermore, it provides an overview of current warehouse stocks.

Solution Design

Developing, coordinating & implementing optimisation concepts

Our solution design offers you a concept which is developed and tuned to your in-house requirements and implemented with your cooperation. Scanmodul takes over planning and implementation up to the last step and offers constant top quality all along the line.

Real Time Location

Registration, evaluation and utilisation of tracking data and security-relevant information

This system offers you various solutions on an integrated multifunctional platform which are ideally harmonised to your company needs and which can be compiled variably.

Inventory tracking: We offer you an overview of your depleted and available warehouse stock and can inform you at one glance exactly where your stock is at any point of time.

Acoustic monitoring: If irregularities arise in connection with refrigerator temperatures and humidity, your staff will be directly informed within an instance via an alarm alert function.

Safety systems: To offer extra safety for your staff and patients. Protection for neonates against kidnapping and baby-swapping. Protection for your staff against assaults, man-operated locking systems – a variety of options are available.

Navigation

Dynamic guidance of patients, visitors and staff

The navigation system is more than a dynamic signage system. An innovation that ensures that not only patients and visitors get to the right place in the clinic at the right time, but that can also have a decisive significance on your future planning by documenting the history of motion.
