The innovative and intelligent **SCAN*slide*** system simplifies the file maintenance of items of daily use and disposables, as well as with the application of the SCAN MODUL NoCount-System or within the classic storage system, e.g. on lower shelfs of pallet racks.

Through a simple movement of the two sliding elements the colors of the red, green or yellow signal area will change. The cleared color will give you some information of the inventory status, the necessity of reorder and registration of demand, which has already occurred.

SCANslide is available in two versions - to be used with SCAN MODUL label holders or self-adhesive.
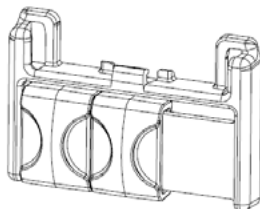

Function

Is the defined subset of the stored item which is observed on the appropriate label or on other media exhausted, the reordering will be signed by sliding the signal area from green to red.

After the reordering has been registered, by scanning the barcode for example, the signal area has to be switched to yellow. Yellow in turn will show the user that the item was ordered and the delivery is instructed.

After the delivery has arrived and goods are placed into stock, the signal will be shifted to green, which shows, that the item is available in a sufficient amount.

Product Details

| **SCAN*slide* for label holders**	**SCAN*slide* self-adhesive**
Item No. 1961840 Size 46,6 mm x 31,3 mm x 8,3 mm Material ABS	Item No. 1961841 Size 46,6 mm x 18,3 mm x 8,3 mm Material ABS
Applicable in combination with Label holders without cover (6x4 cm), vertical, max label size of 57 x 38 mm Item No. 19.61.790 Label holders without cover (4x6 cm), horizontal, max label size of 57 x 38 mm Item No. 19.61.795	Applicable on any potentially adhesive layer and surface
