Our idea of industrial leadership

Our Mission

We have set out to reduce the operational costs and ecological footprint of hospitals, by providing the most advanced, durable, and high-quality logistical solutions available on the market.

Our Vision

We envision a world in which we can provide any health care facility, anywhere in the world, with ergonomic ISO-modular equipment that supports the in-house logistical processes. We aspire to be the global market leader in the field of integrated logistic solutions for the healthcare market by tailoring our products to our customers needs, and the needs of the planet.

Established 1912

to make Danish hospitals better

Founded in 1912 by the silversmith Georg Larsson the company soon specialized in supplying beds and other equipment to Danish hospitals. Ole Larsson continued in his father’s footsteps in 1940. The company moved on in specializing production with a very extensive product range for use in the hospital and nursing home sector.

The milestone in the company’s history

In the early **1970s** a revolutionary modular storage concept was developed and introduced to the Scandinavian market. The ISO standard for 400 x 600 mm modules is based on this system, which was named the “Scan Modul System”. This system is the base for the further development of the company, refined over all the years, winning knowledge and experience. Several complementary products came up, building the today’s end-to-end supply management system.

Today we are

market leader in modular healthcare storage solutions

ScanModul™ today

As the inventor and largest vendor in the field of modular System, ScanModul™ is proud of its leadership position. With the headquarter and own production in Houten, Netherlands and more than 75 employees, ScanModul™ is continuing this progress fully aware of the responsibility the position of market leader entails.

Continuing our successful journey

ScanModul™ prides itself on having excellent quality and the broadest product portfolio in the industry. Innovations and the continuing extension of the product range bring ScanModul™ close to its vision: Providing the healthcare sector worldwide with all storage needs, offering a broad product range, high quality and premium service at any time.

Experienced partner in efficient logistic solutions

Over 110 years of presence in the healthcare market, more than 50 years of experience with logistics systems, and over 2000 completed projects worldwide speak for themselves regarding ScanModul™'s experience. For us, professional project management, from analysis and evaluation through conception to the realization, goes without saying. You, the customer, are always in our focus – because your satisfaction is our primary target.

We are the “one partner” our clients need

As our client you get one partner to assist you with all your supply management needs. We work closely with you during every stage of the process, from analysis to implementation. We focus on the non-clinical processes, which when optimized, can result in significant savings in three areas: less inventory spend, reduced clinical staff time as well as reduced waste.

Optimising your facility through open communication

The key to our custom-fit solutions is an open communication with our clients. We bring the experience that comes from a century of working with hospitals and surgical wards, and our clients bring the knowledge of their unique medical operations. In short, we help our clients to meet the demands of modern medicine through the most efficient supply process possible.

Brilliantly Simple – Simply Brilliant

The idea behind our system is as simple as it is brilliant. Based on a standardized size of 400 x 600 mm, we develop highly flexible and compatible solutions for a wide variety of logistics tasks within the hospital ecosystem.

May we introduce the base of your success

Our NoCount®-Solution

The base of our work and also the base of every optimization in the whole logistics supply chain is our NoCount®-Solution. This solution is a highly flexible tool that allows us to improve any possible initial situation according to our customers' wishes. From small improvements that facilitate the daily workflow to a future-proof complete solution that not only relieves the on-site staff and thus saves valuable time, but also raises the safety in warehousing, as well as the economic aspects to a new level.

A powerfull tool, based on 3 systems

ISO-Modular-System

All of our solutions rely on the flexible ISO modular system, which allows us to find the right combinations for all of our customers' needs.

Two-Bin-System

Our Two-Bin-System uses the simplest visual signal to initiate stock replenishment: an empty box. The trays get divided into two, each side stocked with an equal amount of products. Once a side is empty, the tray gets turned around, allowing the other half of the products to be used. This signals employees replenish the empty half with the necessary products.

First-in-First-out-System

This idea is essential everywhere high amounts of products are handled. With our solutions you can easily implement this system into your processes due to flexible storage units that e.g. allow a wide variation of possible separations to help employees in their daily business.

Benefits of the NoCount®-Solution:

The combination of the Two-Bin-System and the FiFo-System has two significant economies:

- Never run out of products unexpectedly
- Reduced waste of expired products

Medical solutions

ISO Modular storage and transport system

The world of medicine is ever evolving, and your choice of medical products may change over time. When this happens, you do not have to invest in new storage space solutions, but can simply adjust the make-up of a basket, tray, or cabinet.

All components of our ISO-modular system can be used together, and structures can be modified if the needs of a space change.

ISO-Modular-System

The benefits go beyond the use of just a single, modular and flexible storage unit. By using ISO-modular storage in every aspect of hospital logistics, transportation of products from the repository to the OR, or other locations, is done with the lightest effort and absolutely cost-efficient.

Tailor made solutions

ISO Modular System

Modular storage and transport solutions

Trays, Baskets, Shelves

Efficient storage: be organised and flexible

We have developed an ISO certified modular system for trays and baskets, which optimises the flow of supplies from central storage through to the point-of-use. This allows modules – our common name for trays and baskets – to be moved from one place to another instead of picking each item from shelf to shelf. The modules are pivotal in our NoCount® logistic concept.

High Heat green baskets

As we are constantly developing our products and adapting them to the respective situations on the market, we have developed the High Heat green baskets. These baskets are highly heat resistant and thus stand up to the latest and future requirements.

ScanCell®

The high quality mobile storage solution

ScanCell® is our range of high quality mobile storage solutions that utilises our modular system of trays and baskets. The ScanCell® range is fully customisable and has a wide range of clever accessories which create a wealth of design combinations.

ScanCell® products are built from high-quality materials which have been carefully selected to meet rigorous durability targets and strict hygiene criteria.

Cabinets

Experience the timeless design of our ISO-modular cabinets

We tailor our ISO-modular cabinets to your needs. They come in various heights and can be fitted with a wide array of features and accessories, such as locks and telescopic pull-out trays.

Transport solutions

Carts for the safe transportation of medical supplies

Whether you go for a lightweight distribution trolley, open or closed, steel or aluminum, all our transportation solutions are ergonomically designed and guaranteed to make transportation effortless. As with all of our products, every trolley can be customized with accessories to ensure a perfect fit, specifically for you.

ISO Modular System

Modular storage and transport solutions

Racks

Stationary and mobile shelving solutions

Our fully customizable solutions and large range of products allow us to meet any individual and demanding storage requirement.

ScanMo™ is a flexible, modular racking system, which supports both angled and horizontal insertion.

Tailor made solutions

One example: Storage of surgical instruments

Efficient material supply within the central sterilization is a challenge. The smallest hick-ups in the flow of material could be cost-intensive or could endanger the patients safety. The ScanModul® instrument storage offers an efficient and unique solution for the proper, well-organised storage of instruments.

Special solutions tailored to your needs

Due to our own production and our highly qualified staff, we have the possibility to implement a variety of special solutions. Whatever you need, feel free to contact us.
