ScanMo™ Racks - Concept

Maximum flexibility thanks to modular unit approach

ScanMo™ is a flexible, modular racking system, which supports both angled and horizontal insertion. The racks free up valuable floor space and allow for easy access. The system adheres to the ISO modular standard, which means ScanMo™ is compatible with all our modules.

ScanMo™ Racks

You can design your own ScanMo™ Rack with our "unit approach". First choose a "Starter Unit" in the desired width and depth and then choose the desired "Add-On Units" until you reach the desired size. On the following pages you'll find some examples of ScanMo™ Rack configurations.

Need an odd-size? Not a problem. Contact us via the contact form on our website and we will figure out which solution works best for you.

Top features

- Easily adjustable runners
- Using angled runners in the upper positions gives easy access to items stored in higher places
- Extended shelves for the storage of larger items
- Stops in front and rear ensure safe storage and use of modules
- Customisable system allows for a combination of shelves and modules
- All ISO baskets, trays and shelves are compatible with ScanMo™ racking
See chapter 03 for more information and different materials available.

Stationary and moveable versions

The posts come in either a stationary or moveable version and are available in 2 depths. Stationary posts are equipped with leveling feet, while moveable version posts have small wheels of $\varnothing 2\frac{61}{64}$ inch, of which the front ones are equipped with brakes.

The moveable version is meant to be moved around only for cleaning purposes, and is not intended to be used as mobile racking. For mobile racking, please refer to the transport solutions section of the catalogue.

Available in two depths:

Type A =
Depth $26\frac{3}{16}$ inch

Type B =
Depth $18\frac{5}{16}$ inch

Effortless adjustability

We believe that adaptability is key. Our runners, reinforced with glass fiber, facilitate effortless reconfiguration of your storage space. Whether you need to accommodate new equipment or simply reorganize your inventory, our systems adapt to your evolving needs.

Runners with safety stops for modules

Enhanced safety features

Staff safety is our top priority. Our ScanMo™ storage system runners are equipped with stops in the front and rear, guaranteeing secure storage and safe utilization of modules.

For heavy-duty items telescopic runners with wire shelves can be mounted in the bottom part of the racks.

Telescopic rails for heavy loads to be used in the bottom part of the racks

Convenient access to higher storage

Accessing items stored in higher places has never been easier. The use of angled runners in the top positions allows easy access to items stored in higher places. You can effortlessly reach and retrieve items stored at elevated levels, promoting ergonomic efficiency and reducing strain on your staff.

Shelves with runners

For the storage of bulkier healthcare items, our shelves provide the ideal solution. These spacious shelves offer ample room for larger equipment, ensuring that everything is neatly organized and easily accessible when needed.

They are available in a blue powder coated version to rest on the runners and a stainless steel wire version to insert in the runners.

Note: these shelves cannot be used in the moveable set-up.

Corner unit – fixed easily with S-hooks

Heavy-duty wire shelves

Wire shelves, made of lightweight chrome coated steel wire, offer versatile configurability. ScanMo™ racks, featuring heavy-duty wire shelves, can be effortlessly configured as corner racking, conveniently affixed with hooks. Wire shelves are available in 2 widths under Type A (AA and AAA) and 2 widths under Type B (1½B and BB). Additionally, they can be equipped with dividers to create smaller compartments.

Easy configuration and assembly

Starter Unit

Add-On Unit

Wire shelves direct fix with bolt and nut to the side frame.
Width beams set redundant

ScanMo™ posts are made of tubes of 1 3/16 inch powder coated steel

Create your ideal set-up by combining various types of racks and accessories

All ISO baskets, trays and shelves are compatible with ScanMo™ racking.
See chapter 03 for more information and different materials available.

ScanMo™ - Workstation

The perfect combination of shelf and workplace

The ScanMo™ Workstation is a worktop built directly into the shelf. Ideal for sorting materials or preparing them for further transport. Very often this solution is used in the central pharmacy, or even in the warehouse.

Top 4 features

- Powder coated steel
- Fiberglass reinforced nylon runners
- Melamin worktop with upstand, easy to clean
- Ergonomic working height
